DREAM CONTROLS & HUBS

Dream Signal Booster

Product reference: 191716

An accessory for extending the radio-control route between compatible Dream controls and motors.

- Supports compatible Dream radio equipment
- Can extend the practical control route
- Useful for assessed larger or obstructed layouts

Key specifications

Product reference	191716
Purpose	Extend the radio-control path
System family	Compatible Dream motors and control devices
Placement	Between the control device and relevant blinds, subject to assessment

Options to discuss

- Suitable position within the building
- Review of hub and control placement
- Additional equipment only where the assessed layout needs it

Before you order

- A published maximum signal range is not an indoor performance guarantee.
- This device does not convert a different motor protocol into Dream compatibility.
