Jamaican Canopy

A traditional retractable window canopy with manual cord-and-pulley operation.

Product shown in an example setting. Colours and options vary with the specification.

Jamaican is a compact fabric canopy that projects above a window, providing shade without placing a screen directly across the glass. Its lightweight aluminium framework folds back when you want a more open view. A straight or wave-shaped valance gives the lower edge a choice of finishing styles.

Suitable projects

- Domestic windows with an appropriate mounting surface
- Shopfront and small commercial window shading
- Projects where a folding-arm patio awning would be unnecessary

Specification at a glance

Maximum width	5.0 m
Maximum depth / height	1.3 m
Operation	Manual cord and pulley
Framework	Extruded aluminium
Standard frame finish	Pure White
Valance	Straight or wave
Coverboard	Optional

Product summary for planning. Final specification and installation requirements are confirmed in your quotation; follow the instructions supplied with your order.

Jamaican Canopy

Options, practical details and the next step

Choose your options

- Cord-and-pulley operation
- Straight or wave valance
- Optional protective coverboard
- Water-repellent fabric colours and designs

Before you order

- This is a window canopy rather than a large patio roof.
- Manual cords must be positioned and secured safely.
- The fixing surface, opening window movement and exposed location need assessment.

A different shape of shade

The canopy sits above and around the top of the window rather than lowering across the whole opening. It can therefore soften direct sun while keeping the principal sightline through the glass open. The result depends on the height, projection and direction of the sun.

A finish to suit the façade

Fabric colour, valance shape and the optional coverboard make a noticeable difference on a traditional property or shopfront. We can help you select an appropriate combination without overpowering the window proportions.

Common questions

Is the Jamaican Canopy motorised?

The published model uses a manual cord-and-pulley system. If remote operation is essential, we can discuss a different type of external shading.

Does it have a protective cassette?

An optional coverboard protects the retracted canopy. It is a different arrangement from the full cassette used on the folding-arm patio awnings.

Request your quotation. Send your postcode, approximate dimensions and photographs. AdamsBlinds will discuss the specification, supply-only options or a survey and installation proposal. The final size, fabric, colour, controls, installation requirements and lead time are confirmed in your written quotation.
