Prestige Pod

A pergola with louvres that both rotate and slide back to open the roof to the sky.

Product shown in an example setting. Colours and options vary with the specification.

Prestige offers two ways to change the roof above your terrace. The louvres rotate for adjustable shade, and the roof can also retract for a more open-air setting. When closed, the blades meet to shed rainwater into the integrated guttering. It suits projects where keeping the option of an open sky is important.

Suitable projects

- Terraces where daylight into the adjoining room matters
- Outdoor dining with an open-sky option
- Freestanding garden seating areas

Specification at a glance

Maximum single-module length	6.0 m
Maximum louvre span	4.0 m
Louvre rotation	Up to 90°
Additional roof movement	Retracting / sliding
Layouts	Freestanding or lean-to
Standard frame finishes	Pure White or Anthracite Grey
Screen position	Below the cross beams
Drainage	Concealed gutters and nominated drainage posts

Product summary for planning. Final specification and installation requirements are confirmed in your quotation; follow the instructions supplied with your order.

Prestige Pod

Options, practical details and the next step

Choose your options

- Freestanding or lean-to arrangement
- Motorised roof control
- Side screens mounted beneath the cross beams
- Dimmable perimeter LED lighting
- Infra-red heaters and compatible app control

Before you order

- The retracted blades occupy a stacking area; the clear opening must be checked.
- The roof and side screens have separate operating restrictions.
- Weather protection does not make an open-sided structure an indoor room.

Open the terrace when shade is unnecessary

Retracting the roof is useful on duller days or whenever you want a less enclosed space. It can also help preserve light reaching the room behind the pergola, depending on the structure's position and the direction of the sun.

Allow for the roof stack

A retracting roof needs space for the blades when they are parked. We review where that stack will sit and how much clear opening remains, rather than treating the overall footprint as the fully open area.

Common questions

How does Prestige differ from the other Pods?

Its louvres rotate up to 90° and also retract. Classic and Deluxe roof blades rotate up to 150° but do not slide back.

Is every part of the roof opening clear when retracted?

The parked blades need a stacking area. We confirm the resulting clear opening and stack position for the selected size.

Request your quotation. Send your postcode, approximate dimensions and photographs. AdamsBlinds will discuss the specification, supply-only options or a survey and installation proposal. The final size, fabric, colour, controls, installation requirements and lead time are confirmed in your written quotation.
