FREEHANGING CELLULAR BLINDS

Hexacell Freehanging Loop Control

Product reference: Freehanging Loop Control

A cellular blind operated by a continuous cord loop or beaded chain. Compare fabrics and fitting details, with a quotation from AdamsBlinds.

- Continuous manual loop operation
- Cord-loop or beaded-chain arrangement as specified
- Fabric and mechanism selected together

Key specifications

Control	Continuous cord loop or beaded chain, as quoted
Safety fitting	Appropriate fixed retaining or tensioning device
Mounting	Bracket fixing or an assessed no-screw headrail option
Fabric family	Compatible CelloTex cellular fabrics
Finished sizes	Confirmed for the selected fabric, layout and drive

Options to discuss

- Confirmed loop or chain specification
- Choice of compatible fabric effect and colour
- Suitable no-screw headrail arrangement where available
- Assessed light blockers for the recess

Before you order

- A continuous loop must never be left unsecured.
- The chosen safety device needs a suitable fixing position.
- Headrail and drive dimensions differ from the cordless and corded arrangements.

Confirm the control side

Choose a position that can be reached comfortably without leaning across furniture or another window. A close photograph of the intended fixing surface helps us assess the safety device and clearance.

Allow for the mechanism

The headrail and end fittings can be wider than the fabric. We consider the complete assembly when checking recess space, nearby handles and edge light. A fabric width on its own is not an order size for the finished blind.
