Options to discuss

• Compatible CelloTex blackout, light-filtering or sheer cloth

• Type A or Type B frame, selected around the fixing method

• Matching adjustable draw pole

• Assessed edge brushes and treatment of gaps for room darkening

Before you order

• This system is intended for suitable roof or window applications, not door screening.

• Wider-than-standard requests need individual assessment because rail bowing and fabric sag can increase.

• Type B clear corner pieces may be visible when side-fixed.

Keep the first choice simple

For one fabric drawn from one end, start with this model. Compare SkyLite Dual Fabric if you want two different light effects within the same frame, or SkyLite MAX for a longer opening.

Light control is an installation detail too

Blackout cloth blocks light through the fabric, but the perimeter also contributes to the room result. We assess the side channels, edge brushes and gaps around the frame where reduced light leakage is required.
