Options to discuss

• H-Screen or V-Screen orientation

• One-way or suitable split-stack arrangement

• Screw fixing or an assessed adhesive and foam-tape installation

• Adapted 26 mm CelloTex fabric may be considered separately; compatibility and fitting requirements must be confirmed

Before you order

• Window application only; use an assessed PRO configuration for larger doors.

• For V-Screen widths above 1800 mm, a split-draw layout is recommended.

• Size limits are not independent of material, stack and fitting conditions.

• No-drill fitting depends on the surface and adhesive; residue or finish damage on removal cannot be ruled out.

Make room behind the shutter

A blind can fit within the available depth yet still meet a turning louvre or projecting catch. Photographs of the shutter open and closed help us assess the whole arrangement. The stored fabric and the operating handle need clearance as well as the frame.

Choose the right light effect

Blackout cloth reduces light through the material, but the complete result also depends on the frame, corners and installation. A sheer or mesh serves a different purpose and will not provide the same night-time privacy. Ask for compatible physical samples before settling on the colour.
