Options to discuss

• Compatible RAEX rechargeable or mains motor

• Assessed solar panel and charging accessories

• Compatible handset, wall control or smart-home gateway

• Special Z3 headbox for an assessed larger build; no additional roller blind is offered

Before you order

• Motor selection, maximum dimensions and control platform must be confirmed together.

• Different tube or motor arrangements can move at different speeds.

• Use the specified charging equipment; do not assume any USB charger is suitable.

• Zebra fabric bands and edge gaps do not provide a sealed blackout result.

Allow for charging or a cable route

For rechargeable blinds, decide how the charger reaches the blind and use the specified charger and cable. Mains models need an agreed supply position and any associated electrical work. These details are easier to resolve before the room is finished.

Larger blinds use a different drive arrangement

Some larger builds require a 50 mm tube, and wider blinds can use the TP35 motor family. Travel speed and control compatibility can differ from smaller blinds. Ask us to assess a mixed-size group together if simultaneous operation matters.

The listed TP35 arrangement uses Tuya Smart only. Do not assume that RAEX remotes or the CS3108 hub control this larger-motor configuration; controls are confirmed for the actual order.

Agree the app connection

A radio remote does not automatically provide app or voice control. RAEX radio, Zigbee and Wi-Fi options use different connections. Send details of your existing hub or home-automation system so the quotation can identify the necessary equipment.
