Roman Blind Survey Checklist

Useful information for a made-to-measure quotation

Window details

Photograph each window from the front, including the top recess and surrounding wall. Record room name and window quantity.

Width

Measure the recess at the top, middle and bottom in millimetres. Record all three readings without deciding final deductions.

Drop

Measure at the left, centre and right. Check opening sashes and glazing handles.

Obstructions

Note vents, pipework, furniture, radiators, trim, projecting handles and any unsuitable fixing surfaces.

Preferences

Specify approximate fabric colour, lining (e.g. blackout), fold style, manual/motorised preference and fitting position.

Final survey

For fitted orders, our team checks the actual dimensions and safe fixing method before confirming manufacture.
