Linings & Motorisation

Practical choices for Roman blind projects

Standard and satin lining

Soft furnishings finishes with differing fabric weight and handle. Ask for a sample to compare.

Blackout lining

Helps prevent light passing through the face fabric. It does not stop all perimeter light. Door and window fit still matter.

Bonded and interlining

Add thickness and a fuller folded appearance; this also affects stack height and weight.

Motorised control

Motor choice is system-specific. Confirm compatibility, battery access, controls and installation requirements.

Safety

Manual chains need correct safety arrangements. Motorised systems can avoid an accessible operating chain but still need compliant fitting.

Important

Exact motor models, guarantees and service details are confirmed in writing with the selected product and quotation.
