Choosing your vertical blind

Manual systems

Wand (VL31), chain and cord (VL30), mono chain (VL60), or crank (VL64). Choose based on reach, safety and daily use.

Electric systems

VL65 is an electric system with a 230 V AC motor. Power supply and control zones require planning.

Louvre choice

Compare 89 mm and 127 mm fabric louvres and agree stacking and direction of draw.

Light and fabric

Blackout fabric is opaque but standard vertical blinds permit light through edge and overlap gaps.

Commercial requirements

Specify fabric test data, access, fitting substrate, cleaning, child safety and warranties.
