PRODUCT SELECTION / TIMBER SHUTTERS

Assembly Timber Shutters

An abachi shutter supplied for assembly, suited to projects that have the skills and space to complete the panel and frame installation correctly.

Product illustration. The agreed specification and finish determine the supplied product.

Assembly Timber Shutters follow the straightforward flat or curved timber-shutter format, but arrive for assembly. They are intended for a planned supply project where the installer understands the components, opening layout and fixing requirements.

If you prefer a complete measured and fitted service, tell us at the enquiry stage. We can assess the finished project and confirm whether this construction or an assembled shutter range is the more suitable route.

- A defined supply route for competent installers
- Timber louvres in familiar proportions
- A focused range of finishes

At a glance

Material	Abachi wood
Supply format	Components for assembly, with contents specified in the quotation
Louvre widths	50, 70 or 90 mm
Profiles	Flat or curved

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

ASSEMBLY TIMBER SHUTTERS

Planning your specification

Options to discuss

- Full-height or café layout where suitable
- Flat or curved louvres
- Range-specific painted and stained finishes
- Supply-only or a separately scoped installation project

Practical points

- Assembly and fitting require appropriate competence.
- An unassembled shutter is not a universal fit product.
- Confirm the included components and manufacturing sizes before ordering.

Understand what the supply format changes

The documented range includes abachi louvres in 50, 70 and 90 mm widths, with flat and curved profiles. It uses the same focused finish families as the Essential Timber range. Assembly instructions and the specified components form part of the proposed supply, with the precise contents confirmed in the quotation.

This format changes the work required on site; it does not make the measuring stage less important. Panel alignment, squareness and clearance must still be correct for the shutter to open and operate smoothly.

Prepare the installation before ordering

Confirm the opening dimensions, the fixing surface, the chosen frame and how the panels will open. A café arrangement differs from a full-height shutter, and a wide opening may require several leaves. We check the proposed configuration before accepting manufacturing dimensions.

Allow a clean working area and protect the finished timber during assembly. If the opening is irregular or the surrounding material is difficult to fix into, discuss this before placing a supply-only order rather than attempting to resolve it once the parts arrive.

Ask about Assembly Timber Shutters

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
