PRODUCT SELECTION / SLIDING PANELS & SCREENS

Bamboo Board Panels

Sliding panels made from bamboo board, with the construction and supporting track selected around the desired panel size and weight.

Product illustration. The agreed specification and finish determine the supplied product.

Bamboo Board Panels use actual bamboo board within an aluminium-framed sliding arrangement. They provide a solid surface with the distinctive linear character of the material.

The family includes different board constructions, including a heavier version. We confirm the exact board, finish and support requirements rather than treating all bamboo panels as interchangeable.

- Actual bamboo board construction
- A solid decorative screen
- A defined frame and sliding layout

At a glance

Material	Bamboo board
Frame	Aluminium
Construction choices	Standard and heavier board specifications, subject to confirmation
Movement	Sliding track arrangement matched to the panel weight

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

BAMBOO BOARD PANELS

Planning your specification

Options to discuss

- Compatible bamboo board finishes
- Selected board constructions
- Panel and overlap layout
- One-sided or divided stacking where suitable

Practical points

- Track and structure must suit the selected board weight.
- Appearance varies with the board construction and finish.
- Persistent moisture and unusual heat exposure require assessment.

Use the material as the feature

Bamboo has a recognisable structure that changes with the way the board is made and finished. A sample helps show the tone and surface, while the direction of the material across a larger panel affects the overall appearance.

This is separate from the bamboo-effect decorative surfaces elsewhere in the collection. If the material itself is part of the design brief, ask us to identify the board construction and finish explicitly in the quotation.

Plan a substantial sliding panel

A bamboo board panel is a solid component and can impose a significant load on the track. Different constructions have different weights and thicknesses. The structural support, carrier choice and number of panels are assessed together.

For a room divider, confirm how the reverse face will appear and where panels will park when the space is open. Timber-based materials can respond to the conditions in the room; suitability should be checked where there is persistent moisture or a nearby source of heat. We can scope supply to agreed measurements or a complete measured fitting project.

Ask about Bamboo Board Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
