PRODUCT SELECTION / SLIDING PANELS & SCREENS

Clear Insert Panels

Translucent plastic or acrylic panels with timber or organic decorative inserts, allowing light through a material-led interior screen.

Product illustration. The agreed specification and finish determine the supplied product.

Clear Insert Panels suspend a decorative material within a translucent panel. Some use acrylic with natural timber details; others use translucent plastic with selected organic inserts.

They offer a different balance from solid timber or clear glass. Light can pass through the panel while the insert adds pattern and texture, with the degree of visibility determined by the selected construction.

- Light transmission with a decorative insert
- Natural details within a contemporary panel
- Several distinct translucent constructions

At a glance

Panel material	Acrylic or another specified translucent plastic
Decorative inserts	Natural timber or compatible organic materials
Frame	Aluminium
Light effect	Translucent; visibility varies with the chosen construction

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

CLEAR INSERT PANELS

Planning your specification

Options to discuss

- Timber insert patterns
- Selected grooved acrylic designs
- Organic insert designs
- Panel layout and stacking direction

Practical points

- These constructions are not glass panels.
- Light and privacy depend on the selected insert and room lighting.
- Surface care must suit the exact plastic material.

Keep the materials distinct

The range includes acrylic constructions with wood inserts, grooved versions and other translucent plastic panels with organic decorative material. These are separate specifications, with different thicknesses, weights and surface characteristics.

We identify the selected panel material and insert in the quotation. The appearance can change substantially with backlighting, so consider the brighter and darker sides of the room before deciding which design gives the right amount of screening.

Protect the finish and plan the track

Acrylic and other plastics require care suited to their surface. Abrasive cleaning or unsuitable chemicals can affect clarity and appearance. Position the screen with likely contact, cleaning access and nearby heat sources in mind.

The panel sits in an aluminium frame and moves along a specified track arrangement. For room divisions, review both faces and the way neighbouring panels overlap. We confirm the panel dimensions, supporting structure and any lower guidance before manufacturing sizes are agreed.
