PRODUCT SELECTION / SLIDING PANELS & SCREENS

Cork Surface Panels

Board-backed sliding panels faced with cork material, creating a warm, textured surface on both sides of a framed interior screen.

Product illustration. The agreed specification and finish determine the supplied product.

Cork Surface Panels provide a recognisable natural texture in a sliding-panel format. Cork material covers the board-backed construction, with an aluminium frame defining the perimeter.

The range is useful to consider where the screen should feel warmer and less reflective than a metal or glazed finish. Its pattern and colour are part of the decorative choice rather than a claim of a particular acoustic rating.

- A warm, tactile decorative surface
- Both panel faces can be part of the design
- A less reflective interior screen

At a glance

Facing	Cork material on the listed board construction
Faces	Both sides in the specified construction
Frame	Aluminium
Movement	Tracked sliding panels

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

CORK SURFACE PANELS

Planning your specification

Options to discuss

- Compatible cork surface designs
- Panel widths and overlap arrangement
- Frame finish selection
- One-sided or split stacking where suitable

Practical points

- No acoustic rating is implied by the use of cork alone.
- Care and moisture suitability depend on the selected facing.
- Natural surface character can vary.

Choose a texture that works across the whole panel

Different cork designs create different surface rhythms. A small sample shows the character of the material, while a larger illustration helps explain how that pattern extends across the panel.

The listed construction uses cork material on both faces. That is helpful for a room divider, but the exact finish and edge treatment still need to be confirmed. Natural-looking variation is expected; the surface should not be treated as a perfectly identical printed repeat.

Plan for ordinary use and cleaning

A cork-faced panel is a decorative interior component. Discuss likely contact, cleaning routines and nearby sources of moisture before choosing it for a busy commercial space or a kitchen-adjacent opening.

The track and support are designed around the finished board-backed panel. Panel width, overlap and the space needed to park the screen affect the opening you can use. We can assess these details during a project survey or review agreed dimensions for a supply-only quotation.

Ask about Cork Surface Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
