PRODUCT SELECTION / TIMBER SHUTTERS

Essential Timber Shutters

A straightforward abachi shutter range with flat or curved louvres and a focused selection of painted and stained timber finishes.

Product illustration. The agreed specification and finish determine the supplied product.

Essential Timber Shutters concentrate on familiar shutter layouts and practical everyday light control. They are a useful starting point when you want real timber without selecting from the more elaborate decorative profiles in the collection.

Flat and curved louvres give two different appearances. Choose the blade shape and finish first, then arrange the panels around how the window is opened, cleaned and used.

- A clear set of everyday shutter choices
- Real timber with adjustable louvres
- Several useful privacy layouts

At a glance

Material	Abachi wood
Louvre widths	50, 70 or 90 mm
Louvre profiles	Flat or curved
Control	Side tilt rod
Finish selection	Range-specific painted and stained finishes

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

ESSENTIAL TIMBER SHUTTERS

Planning your specification

Options to discuss

- Full-height shutters
- Café-height coverage
- Tiered opening panels
- Flat or curved louvre profile

Practical points

- The core finish selection differs from the decorative ranges.
- Height and panel-width limits depend on the layout.
- Timber grain and stain absorption vary naturally.

A focused timber specification

The range includes 50, 70 and 90 mm louvres in abachi wood. Flat blades are documented at 10 mm thickness and curved blades at 9 mm. The finish selection belongs to this range; it should not be assumed to include every decorative treatment shown on other shutter pages.

A side operating rod keeps adjustment straightforward. A painted finish gives a more consistent colour, while a stained finish shows the character and variation of the timber. Ask for a sample when matching a floor, door or existing window frame.

Full height, café or separate sections

A full-height layout covers the opening, a café arrangement leaves the upper window clear, and a tiered arrangement provides separately opening upper and lower panels. Each approach changes the position of rails and the amount of frame visible.

The size limits of this range differ from those of the deeper decorative shutter families. We confirm the number of panels, any dividing rails and the frame detail after reviewing your dimensions. For supply and installation, the survey establishes those details before manufacture.
