PRODUCT SELECTION / INTERIOR FOLDING DOORS

Flush Bifold Door

A two- or four-panel interior bifold door with a cellular core, designed to present a flat face when closed.

Original catalogue detail shown at its available resolution. The agreed specification determines the supplied door.

The Flush Bifold Door uses broader leaves than a narrow-section folding door. Two or four panels fold together, then sit flat across the opening when closed.

The face can be kept plain or developed with selected panel and glazing-aperture details. It is useful where a simpler door-like appearance is preferred to a repeated narrow accordion pattern.

- A flat face when closed
- Broader leaves with a simpler visual pattern
- Several decorative face options

At a glance

Core	Cellular construction in the listed range
Panel count	Two or four leaves
Closed appearance	Flat panel arrangement
Glazing apertures	Optional; glazing separately specified
Alternative movement	Selected sliding arrangements by quotation

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

FLUSH BIFOLD DOOR

Planning your specification

Options to discuss

- Plain door faces
- Selected panelled designs
- Glazing apertures with separately agreed glass
- Two- or four-leaf layout

Practical points

- The folded leaves still need parking space.
- Glazing is not automatically included with an aperture design.
- Performance requirements depend on the complete door specification.

Choose the face treatment

The listed construction uses a cellular core with a decorative timber finish. Plain faces, inset-panel layouts and glazing-aperture options can be considered, subject to the chosen configuration and current production.

For an aperture version, glass is a separately specified item rather than assumed within the base door supply. The aperture dimensions and the intended glazing must be confirmed together before the leaves are made.

Plan the fold and clear passage

A two-panel and a four-panel arrangement create different folded widths and operating patterns. We check the opening, the upper support and the direction in which the leaves will move. Handles, locks and the surrounding trim also affect the usable passage.

Selected designs may be considered in a sliding arrangement as a separate specification. Tell us whether the priority is minimum swing space, a flat closed appearance or a particular panel design. Any required fire, acoustic or accessibility performance is reviewed against the actual proposed door construction.
