PRODUCT SELECTION / SLIDING PANELS & SCREENS

Framed Screen Panels

Open-weave screen fabric held in a slim aluminium frame, for sliding control of light and glare across larger areas of glazing.

Catalogue fabric detail. The complete panel and finish are confirmed in your quotation.

Framed Screen Panels place screen fabric inside a defined aluminium perimeter. The open weave filters the view and light while the rigid frame gives each sliding panel a clear edge.

They are useful to consider for wide windows and glazed areas where you want softer daylight without the solid appearance of a board-backed panel. Fabric colour and openness influence the result, so the choice should follow the room rather than the photograph alone.

- Filtered daylight in a structured panel
- Useful for broader glazed openings
- A clear choice of fabric and frame

At a glance

Panel	Screen fabric in an aluminium frame
Fabric character	Open weave; exact openness depends on the selected fabric
Movement	Sliding on a specified multi-track layout
Applications	Interior glazing and suitable room-screening projects

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

FRAMED SCREEN PANELS

Planning your specification

Options to discuss

- Plain or decorative screen fabrics
- Several fabric openness and colour choices
- Panel widths arranged to suit the glazing
- One-sided or split stacking where feasible

Practical points

- Privacy changes with lighting conditions.
- Fabric performance is specific to its selected reference.
- Parked panels and tracks need adequate space.

Understand the screen effect

The fabric allows some light and visibility through its weave. A darker or more open sample can behave differently from a pale or tighter one, and the view changes with the relative brightness inside and outside the room.

The collection includes plain and decorative screen families. Their compositions and openness vary. We confirm the selected fabric reference and relevant technical information instead of applying one percentage or performance statement to the whole range.

Work out the overlap and access

The panels move along tracks and can be arranged to stack in a chosen direction. Overlaps help manage the gaps between neighbouring panels, but the frame divisions remain part of the finished appearance. Allow space for panels to park when access to a door or window is required.

Screen fabric does not provide guaranteed night-time privacy when the room is brightly lit. If that is essential, discuss a separate opaque treatment or another panel construction. We can compare the choices while planning the measured supply and installation.
