PRODUCT SELECTION / SLIDING PANELS & SCREENS

# Free Hanging Screen Panels

Weighted screen-fabric panels with no surrounding frame, creating a lighter sliding treatment for windows and interior divisions.

*Product illustration. The agreed specification and finish determine the supplied product.*

Free Hanging Screen Panels use weighted fabric drops rather than a rigid perimeter frame. The result is a simpler fabric-led appearance, with long vertical edges and fewer visible structural lines.

The panels slide across a track and gather behind one another. They can suit broad glazing or an interior screen where the softness of fabric is preferred to the more defined edges of a framed system.

- A simple fabric-led appearance
- Less visible framing
- Flexible panel arrangements for wide openings

## At a glance

| | |
|---|---|
| **Construction** | Screen fabric with a bottom weight |
| **Perimeter** | No rigid surrounding frame |
| **Movement** | Sliding panels on a specified track system |
| **Fabric choice** | Range-specific screen fabrics |

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

FREE HANGING SCREEN PANELS

# Planning your specification

## Options to discuss

- Compatible screen colours
- Panel overlap and stacking direction
- Track layout for the opening
- Window or interior-screen applications

## Practical points

- Fabric edges can move in draughts.
- This is a visual screen rather than a solid partition.
- Privacy depends on the fabric and lighting conditions.

## A lighter visual treatment

Screen fabric is selected for its colour, weave and openness, then kept hanging by the specified bottom weight. The absence of a frame changes the way the edge sits, particularly close to doors, draughts and passing movement.

The fabric is translucent or open to the degree defined by the selected sample. It should be assessed in the intended lighting conditions. A material that provides useful daytime screening can allow a clearer view into a brightly lit room after dark.

## Plan the panel arrangement around use

Panel width, overlap and track count determine how much of the opening is covered when the screen is drawn back. A narrow room divider may need a different arrangement from a wall of glass with a frequently used door at one end.

For supply and installation we review the head fixing, the clear drop to the floor or sill and the route of the moving panels. Where the treatment is intended to divide a space, leave enough clearance for people and furniture without brushing the fabric on every pass.
