PRODUCT SELECTION / EXTERIOR SHADING

Guided Timber Venetians

Exterior timber Venetian blinds with side guides and a choice of flat or curved slats, designed around a clearly specified façade installation.

Product illustration. The agreed specification and finish determine the supplied product.

Guided Timber Venetians use a structured side-guide arrangement to support an exterior wooden blind. They are suited to projects where the guide, headrail and fixing details need to be coordinated with the building.

The slat range includes flat and curved profiles with different proportions. The choice affects the appearance, the blind weight and the operating requirements, so it is made alongside the dimensions and exposure assessment.

- A defined exterior guide system
- Several timber slat proportions
- Coordinated headrail and façade details

At a glance

Material	Pine, cedar, hemlock or iroko as specified
Flat slats	Listed widths: 50, 60, 70, 80 or 90 mm
Curved slats	Selected 70, 80 or 90 mm profiles
Guidance	Side guides with project-specific brackets
Head finish	Optional coordinated timber cover

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

GUIDED TIMBER VENETIANS

Planning your specification

Options to discuss

- Flat or curved timber profile
- Compatible exterior stains or paints
- Reveal-mounted or offset guides
- Suitable crank or motor operation

Practical points

- Maximum dimensions depend on timber, profile and operation.
- Not every exterior sample is compatible with this range.
- Wind exposure, support and maintenance access require assessment.

Choose the profile that suits the opening

Flat profiles are listed in 50, 60, 70, 80 and 90 mm widths, with curved options in selected wider sizes. The flat and curved constructions have different thicknesses. Timber choices include pine, cedar, hemlock and iroko where compatible.

Exterior paint and stain options are linked to the timber and blind construction. A matching timber headrail cover can be discussed where the metal headrail needs to be concealed. Its size depends on the space and fixing arrangement.

Make the side guides part of the plan

Guides can be fixed to the reveal or supported away from the wall with suitable brackets. That decision affects clearances, visible projections and the way the blind relates to glazing, doors and other façade elements.

Crank or motor operation is assessed for the finished blind, with dimensions and loads confirmed for the selected timber and mechanism. We also establish access for fitting and maintenance. The final quotation records the operating restrictions and finish-care requirements for the actual exposure.
