PRODUCT SELECTION / SLIDING PANELS & SCREENS

Linked Tile Panels

A frameless decorative screen made from linked PVC squares, producing a modular hanging panel with a regular grid pattern.

Product illustration. The agreed specification and finish determine the supplied product.

Linked Tile Panels create a screen from individual polymer squares connected by metal pieces. The result has a visible modular grid and no rigid frame surrounding the whole panel.

They are useful to consider as a light decorative division where the connections and repeating tile shape are part of the intended appearance. This differs from a continuous solid board or a stretched fabric drop.

- A clear repeating square pattern
- No surrounding rigid frame
- A distinctive modular interior feature

At a glance

Material	PVC squares linked with metal connectors
Module	300 × 300 mm in the listed design
Frame	No rigid perimeter frame
Format	Decorative hanging panel on a specified support system

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

LINKED TILE PANELS

Planning your specification

Options to discuss

- Compatible polymer tile colours
- Panel dimensions based on the module
- Screen grouping and overlap arrangement
- Project-specific track and support detail

Practical points

- The modular construction influences the final size.
- Connected tiles can move differently from a rigid panel.
- This decorative screen is not a sealed partition.

Work with the module

The listed design uses 300 × 300 mm PVC squares. The module influences the overall dimensions and the pattern seen across the opening. Final panel dimensions and edge arrangements must be confirmed around that construction.

Selected tile colours create different effects, especially where light falls behind or through the screen. We confirm the available finish and the way the metal connections will appear rather than treating the panel as an uninterrupted sheet.

Use it as a decorative screen

A linked assembly has different movement and edge behaviour from a rigid framed panel. Consider draughts, passing traffic and the possibility of the tiles being touched in normal use. It is most useful when the setting allows the modular surface to hang freely.

The upper support and sliding arrangement are specified for the finished panel. Tell us whether the screen will cross a window, divide a room or sit beside a doorway, so the parked position and practical clearance can be assessed before supply or installation.

Ask about Linked Tile Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
