PRODUCT SELECTION / SLIDING PANELS & SCREENS

Mineral Effect Panels

Board-backed sliding panels with decorative stone-effect film, for a mineral-inspired appearance in a clearly specified surface finish.

Product illustration. The agreed specification and finish determine the supplied product.

Mineral Effect Panels use a decorative film to create the appearance of stone across a solid panel. The facing is applied to a board core and enclosed within an aluminium frame.

They offer a separate choice from the actual stone-laminate range. The design is selected for its printed or decorative effect, with the supporting construction and care requirements stated clearly in the quotation.

- A mineral-inspired decorative appearance
- Solid visual screening
- A clear distinction between finish and core material

At a glance

Core	Board-backed construction
Facing	Decorative stone-effect film
Frame	Aluminium
Faces	Both sides in the listed construction

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

MINERAL EFFECT PANELS

Planning your specification

Options to discuss

- Compatible mineral-inspired patterns
- Panel pattern direction
- Frame finish coordination
- One-sided or split stacking arrangement

Practical points

- The surface is a stone effect, not natural stone.
- Repeating pattern details may be visible.
- Care advice follows the selected decorative film.

Select the pattern as a surface design

Stone-like colour, grain and texture can give a panel a strong visual presence. Look at the size and direction of the pattern as well as the shade, particularly where a set of panels will form a longer interior division.

A small sample may show only part of the design. We can discuss how the chosen facing will be arranged and whether repeated details are likely to be visible. The frame and overlap also divide the pattern across the opening.

Keep the finish practical

The listed panel has a decorative facing on both sides, making it useful to consider for a room divider. Confirm the precise facing, reverse appearance and edge treatment before ordering, especially where the screen is seen from two different interiors.

Cleaning must suit the decorative film. Do not choose it on the assumption that it will behave like a piece of quarried stone. We assess the track support, panel dimensions and parked position alongside the surface choice, then quote for supply or a complete measured installation.
