PRODUCT SELECTION / SLIDING PANELS & SCREENS

Open Lattice Panels

Natural timber sliding screens with diagonal, crossed or grid arrangements, designed to divide a space while retaining an open view.

Product illustration. The agreed specification and finish determine the supplied product.

Open Lattice Panels use the spaces between timber members as part of the design. Diagonal blades, crossed arrangements and regular grids offer different ways to screen a room without placing a solid surface across it.

They can suit interior divisions where light and a sense of connection between spaces are welcome. The screen is decorative and partially open, so it should be chosen with realistic expectations about privacy.

- Light passes through the open structure
- Natural timber in a graphic pattern
- A less enclosed way to divide a room

At a glance

Material	Natural timber members; frame details vary
Patterns	Diagonal, crossed or grid arrangements
Screening	Open structure with partial visibility
Movement	Tracked sliding panels

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

OPEN LATTICE PANELS

Planning your specification

Options to discuss

- Diagonal timber pattern
- Crossed members in different planes
- Regular timber grid
- Compatible timber finish choices

Practical points

- An open lattice does not provide complete visual privacy.
- The visible pattern changes with the viewing angle.
- Panel stacking and edge clearance need planning.

Pick the geometry that suits the room

A diagonal arrangement creates a different view from a square grid. Some designs place the timber members in more than one plane, adding depth and changing what can be seen through the screen from an angle.

Natural timber is the principal visible material, with the frame and profile construction varying by design. The selected finish can either emphasise the grain or create a more uniform painted appearance. We confirm the pattern, material and compatible colour together.

Think about the screen in use

The panels move on a track and need a defined parked position. An open lattice still occupies physical space when stacked, and its edges should not obstruct a frequently used route through the room.

Consider how the pattern aligns with doorways, furniture and other vertical lines. Where several panels sit together, their frame divisions become part of the overall grid. We review the fixing structure, panel dimensions and any lower guidance as part of the measured supply and installation proposal.
