PRODUCT SELECTION / EXTERIOR SHADING

Outdoor Hinged Shutters

Exterior timber shutters with hinged folding panels and either fixed or adjustable louvres, designed to suit the building and its exposure.

Product illustration. The agreed specification and finish determine the supplied product.

Outdoor Hinged Shutters create an exterior screen with the character of timber joinery. The panels fold open without a track-guided arrangement, allowing the window to be screened or exposed as required.

The louvres can be specified as fixed or adjustable where compatible. That decision affects how you control the view and light without moving the whole shutter panel.

- Timber joinery character on the exterior
- A choice of fixed or adjustable louvres
- An opening arrangement planned around the façade

At a glance

Construction	Exterior timber shutter panels
Louvre width	55 mm in the listed design
Louvre choice	Fixed or adjustable, as specified
Opening	Hinged folding panels
Timber	Selected cedar, hemlock, pine or iroko where suitable

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

OUTDOOR HINGED SHUTTERS

Planning your specification

Options to discuss

- Fixed or adjustable louvres
- Compatible timber species and finish
- Reveal or face-fixed arrangement
- Panel divisions and rails planned for the opening

Practical points

- Exposure and the open-panel position must be assessed.
- Timber finishes need appropriate maintenance.
- No security rating is implied by the shutter format.

Choose the timber and louvre arrangement

The listed construction uses 55 mm louvres within a substantial timber panel. Cedar, hemlock, pine and iroko are among the timber choices to assess, with the actual species and exterior finish confirmed for the order.

Panel count and width are determined by the opening and hinge arrangement. Tall shutters may require dividing rails, which become part of the visible design and support the chosen louvre configuration.

Treat it as exterior joinery

The installation can be considered within the reveal or to the wall face, depending on the frame and fixing detail. We check the path of the open panels, any internal latch arrangement and the space around adjacent windows, pipes or other façade features.

The support, exposure and method of securing the panels in normal use need to be established before manufacture. Exterior timber requires appropriate finish maintenance. These shutters are specified for shading and privacy; any separate security requirement must be assessed explicitly rather than assumed from their appearance.
