PRODUCT SELECTION / EXTERIOR SHADING

Outdoor Screen Fabrics

A selection of technical screen fabrics for an assessed exterior shading project, with the fabric and supporting system specified separately.

Product illustration. The agreed specification and finish determine the supplied product.

Outdoor Screen Fabrics offer an alternative material route for exterior shading. Their open weaves can filter light and retain a degree of view, with different colours and constructions producing different results.

This page describes the fabric selection. A complete blind or panel needs a compatible supporting and operating system, which is assessed as part of your project rather than assumed to be included with the material.

- A choice of technical exterior fabrics
- Light filtering with a degree of outward view
- Clear separation of material and system specification

At a glance

Product	Technical screen fabric selection
Construction	Reference-specific synthetic weave and coatings
Openness	Varies by fabric and colour; confirmed from current data
Complete system	Specified separately for the project

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

OUTDOOR SCREEN FABRICS

Planning your specification

Options to discuss

- Compatible exterior screen colours
- Different weave and openness choices
- Material supply where suitable
- A separately specified complete shading installation

Practical points

- Fabric supply does not automatically include a blind mechanism.
- Performance values depend on the exact reference.
- Exposure and system compatibility require assessment.

Select by fabric reference, not a universal percentage

The listed families use specified combinations of polyester, PVC and, in some constructions, other coatings. Openness, thickness, weight and optical performance vary between references and colours.

We confirm the current technical data for the exact sample selected. A darker or tighter weave can change glare, visibility and the appearance of the façade. Screening also changes with relative light levels, so it should not be treated as guaranteed night-time privacy.

Confirm the complete shading arrangement

Tell us whether you need material supply, a replacement fabric for identified equipment or a new fitted shading project. For replacement work, the existing mechanism, dimensions and fixing method need to be understood before compatibility can be confirmed.

A new installation requires an assessed frame or blind system, exposure limits and suitable controls. We do not assume that a fabric listing describes a complete zip-guided blind or a particular motor package. The quotation identifies the material, the finished product and the installation scope clearly.

Ask about Outdoor Screen Fabrics

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
