PRODUCT SELECTION / EXTERIOR SHADING

Outdoor Woven Wood Blinds

A traditional woven timber roll-up blind for an assessed exterior setting, with the texture of joined wood strips and a simple lifting format.

Product illustration. The agreed specification and finish determine the supplied product.

Outdoor Woven Wood Blinds provide a softer, more textured alternative to a rigid exterior Venetian. Slender timber elements form a woven surface that rolls upwards from the bottom when raised.

They can be considered for suitable outdoor openings where the character of woven wood is part of the design. The selected weave, timber treatment and exposure all need to be confirmed for the project.

- A natural woven texture outdoors
- A familiar roll-up operating format
- A softer visual alternative to rigid exterior slats

At a glance

Material	Specified woven timber construction
Format	Traditional bottom-up roll-up blind
Operation	Cord lifting system with an appropriate installation arrangement
Head space	Roll size depends on the selected weave and drop

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

OUTDOOR WOVEN WOOD BLINDS

Planning your specification

Options to discuss

- Compatible exterior woven constructions
- Suitable timber finish
- Project-specific fixing arrangement
- Supply or measured installation scope

Practical points

- The raised roll continues to cover part of the opening.
- Interior woven materials are not automatically exterior suitable.
- Exposure, cord safety and maintenance requirements must be confirmed.

Understand how the blind gathers

The traditional roll-up arrangement uses cords to lift the blind, gathering the material into a roll at the top. The depth of that roll increases with the drop, so it occupies part of the opening even when the blind is raised.

Different woven constructions have different textures and roll sizes. A sample helps show the material, while the full opening dimensions establish the practical head space. We confirm the precise weave and treatment rather than assuming that an interior woven-wood sample is suitable outdoors.

Assess a suitable installation position

The fixing must support the complete blind and allow it to operate without catching on surrounding details. Wind exposure, moisture and access for maintenance are considered before the specification is agreed. The blind should be used within the restrictions confirmed for its position.

For accessible cord operation, the installation also needs an appropriate safety arrangement. Tell us whether children can reach the opening and how the outdoor space is used. We incorporate the operating, fixing and care details into the supply or measured installation proposal.
