PRODUCT SELECTION / SLIDING PANELS & SCREENS

Patterned Surface Panels

Solid sliding panels with decorative films or synthetic sheet facings, from abstract textures to geometric and metallic-effect surfaces.

Product illustration. The agreed specification and finish determine the supplied product.

Patterned Surface Panels offer a broad decorative palette over a stable board-backed format. The facing can introduce a graphic pattern, a subtle textured effect or a more reflective metallic appearance.

They are useful when the panel is intended to contribute to the interior design as well as divide or screen the space. The surface is selected as a finish; metallic-looking options should not be mistaken for solid metal construction.

- A broad decorative surface choice
- Solid visual screening
- Pattern and frame coordinated as one design

At a glance

Core	Board-backed panel
Facings	Decorative film or synthetic sheet, depending on the design
Frame	Aluminium
Finish families	Abstract, textured, geometric and metallic-effect

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

PATTERNED SURFACE PANELS

Planning your specification

Options to discuss

- Quiet textured surfaces
- Graphic or geometric patterns
- Selected metallic-effect finishes
- Agreed pattern direction across several panels

Practical points

- Metallic-effect finishes are not solid metal.
- Material and cleaning advice vary by facing.
- Performance requirements need evidence for the selected construction.

Judge the pattern at the right scale

The family includes abstract motifs, sand-like effects, relief patterns, geometric treatments and metallic-effect films. Some are quiet when viewed from across a room but reveal texture close up; others make a stronger feature.

Ask to see the sample with the intended frame finish. The direction of a pattern may need to be agreed, particularly where several panels sit alongside one another. A repeated texture can make small differences in orientation more noticeable.

Choose a panel that works from both sides

The construction uses decorative facings over a board core, generally within an aluminium frame. A solid core gives visual separation but does not, by itself, establish an acoustic or fire performance rating.

For a room divider, confirm the facing and edge appearance on the reverse side. The sliding layout also needs parking space and suitable structural support. We discuss track depth, panel overlap and cleaning requirements alongside the visible pattern so the finished screen is practical to use.
