PRODUCT SELECTION / SLIDING PANELS & SCREENS

Reflective Surface Panels

Decorative sliding panels with reflective synthetic surfaces, providing a glass-like effect over a solid board core.

Product illustration. The agreed specification and finish determine the supplied product.

Reflective Surface Panels introduce shine, reflections and geometric detail into an interior screen. The finish is formed from decorative synthetic sheet over a board core, held within an aluminium frame.

This construction produces a glass-like decorative appearance while remaining a solid surfaced panel. It should be chosen for its actual material and pattern, rather than assumed to be a transparent glazed panel.

- Reflective detail across a moving screen
- A strong decorative interior feature
- Solid visual division with defined panel edges

At a glance

Core	Solid board
Facing	Decorative reflective synthetic sheet
Frame	Aluminium
Appearance	Glass-like reflective effects; specific patterns vary

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

REFLECTIVE SURFACE PANELS

Planning your specification

Options to discuss

- Repeating reflective patterns
- Selected light-catching surface designs
- Coordinated frame finish
- One-sided or split panel stacking

Practical points

- This is a synthetic decorative facing, not transparent glass.
- Reflections depend on the room and viewing angle.
- Cleaning products must suit the selected surface.

Use reflection deliberately

The available surface families include small repeating reflective patterns and other light-catching treatments. Their effect changes with the angle of the panel, nearby lighting and the objects reflected in it. A sample is useful for judging sheen, but the scale of the repeated design also deserves attention.

For a room divider, consider both faces and the appearance when panels overlap. A reflective surface can become a strong feature, so it often works best when the surrounding wall, track and frame finish are kept relatively restrained.

Specify the construction clearly

The decorative surface is supported on board and uses an aluminium panel frame. It is distinct from the tempered-glass constructions elsewhere in this collection, with different handling, cleaning and edge details.

We confirm the selected finish, panel dimensions and suitable track support before quotation. Avoid abrasive cleaning or unapproved chemicals on decorative surfaces; the final care instructions should follow the actual facing selected. Tell us if the screen will be close to a heat source or exposed to unusually strong direct sunlight.

Ask about Reflective Surface Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
