PRODUCT SELECTION / INTERIOR FOLDING DOORS

Reinforced Glazing Fold Door

A substantial timber folding-door frame prepared for glazing, combining veneered lamellar sections with metal piano hinges.

Product illustration. The agreed specification and finish determine the supplied product.

The Reinforced Glazing Fold Door develops the substantial folding format with openings for glass. It is intended for interiors that need both a defined timber structure and a lighter glazed appearance.

The base door is prepared for the agreed glazing specification. Glass is a separately confirmed part of the project, so its type, supply and installation must be coordinated with the frame before manufacture.

- Substantial timber sections with glazing potential
- Metal hinge construction
- Clear coordination of frame, glass and installation

At a glance

Door sections	Veneered lamellar timber
Hinges	Metal piano hinges
Guide	Galvanised metal in the listed construction
Glazing	Separately specified for the prepared openings
Application	Interior folding doorway

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

REINFORCED GLAZING FOLD DOOR

Planning your specification

Options to discuss

- Compatible timber veneers
- Agreed glazing and aperture arrangement
- Coordinated handle and hinge detail
- Complete fitting scope with the glass responsibility defined

Practical points

- Glass is not automatically included in the base frame supply.
- The track and support must suit the complete glazed assembly.
- Formal performance requirements need a confirmed product specification.

Coordinate the glazing with the timber structure

The listed construction uses veneered lamellar timber sections, a galvanised guide and metal piano hinges. Timber handles and closing details coordinate with the selected finish. The glass aperture dimensions depend on the complete door design.

The intended glazing must suit the aperture, the movement of the door and the way the opening will be used. We confirm those details instead of treating the frame as compatible with any unspecified glass.

Allow for the finished weight and stack

Glazing adds to the load carried by the track and fixings. The complete assembly, rather than the timber frame alone, determines the supporting requirements. We assess the upper fixing, floor clearance and space for the folded sections.

For a fitted project, the survey establishes the opening and the responsibility for the glass supply is recorded in the quotation. Tell us if the doorway must meet a particular fire, acoustic, accessibility or security requirement so the proposed construction can be checked before the order is placed.
