PRODUCT SELECTION / EXTERIOR SHADING

Square Profile Screens

Exterior timber sliding screens built with fixed square-section members, for a crisp geometric appearance and partial screening.

Product illustration. The agreed specification and finish determine the supplied product.

Square Profile Screens use fixed timber members with a square cross-section. The repeated profiles give the panel a clear geometric rhythm and a different depth from a flat-bladed screen.

They can suit exterior openings where the screen is intended to complement contemporary joinery or façade details. The panel moves as a whole, while its timber members stay in their set position.

- A crisp square-section timber pattern
- Depth and partial visibility
- A clear sliding-panel format

At a glance

Timber	Cedar, hemlock or pine as specified
Profile section	30 × 30 mm in the listed design
Members	Fixed
Panel thickness	40 mm in the listed construction
Movement	Sliding panel arrangement

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

SQUARE PROFILE SCREENS

Planning your specification

Options to discuss

- Compatible timber finish choices
- Panel widths and overlap layout
- Reveal or wall-face positioning
- Coordinated façade groupings

Practical points

- The fixed profiles do not provide adjustable tilt control.
- Screening depends on the viewing angle.
- Exposure, fixing support and access require assessment.

Use the profile to shape the view

The listed design uses 30 × 30 mm timber profiles within a 40 mm panel construction. Cedar, hemlock and pine are the documented materials, with compatible exterior finishes selected for the project.

The spaces and depth between members determine what can be seen through the screen. That view changes as you move along the façade. Consider privacy from the relevant angles rather than judging the panel only from a straight-on photograph.

Coordinate the track and surrounding details

The sliding layout requires space for the panels to overlap or park. A reveal-mounted installation and a wall-face installation have different clearances, and the frame must work with the door or window behind it.

We assess the upper support, any lower guidance and access for maintenance. The finish and timber will need appropriate exterior care. If several panels are intended to align along an elevation, include the complete arrangement in the enquiry so the visible divisions can be planned together.
