PRODUCT SELECTION / INTERIOR FOLDING DOORS

Tall Glass Bifold Door

A timber bifold door with tall glazed centres and narrow vertical timber sections, for a lighter-looking interior division.

Product illustration. The agreed specification and finish determine the supplied product.

The Tall Glass Bifold Door concentrates the timber around tall central glass areas. The two- or four-leaf layout folds aside, then creates a flat arrangement when closed.

It is a useful alternative when light between rooms is a priority and a more open appearance is preferred to a heavily panelled timber door. The selected glass determines the actual view and privacy.

- A lighter-looking glazed division
- Solid timber framing around the glass
- A flat appearance when the leaves are closed

At a glance

Main frame	Solid timber
Leaf arrangement	Two or four folding leaves
Visible vertical sections	70 mm in the listed design
Centre	Tall glazing, specified with the door
Closed appearance	Flat leaf arrangement

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TALL GLASS BIFOLD DOOR

Planning your specification

Options to discuss

- Compatible timber finishes
- Selected glazing type and finish
- Opening direction and suitable locking
- Separately assessed sliding version

Practical points

- Glazing suitability and supply are confirmed in the quotation.
- The folded leaves occupy part of the opening.
- No certified door performance is assumed without evidence.

A clear balance of timber and glass

The listed design uses solid-timber leaves with 70 mm vertical side sections and a central glazed area. The glass forms part of the proposed door specification, with its type, finish and supply confirmed in the quotation.

Timber finishes are selected from the compatible range. Review the colour alongside the glazing, because the room visible through the door will influence how the completed assembly is perceived.

Plan the movement around everyday access

The folded position, track and handle need enough space to operate without interfering with adjacent furniture or trim. The upper support and finished floor level are checked before the manufacturing sizes are agreed.

Suitable locking and selected sliding arrangements can be discussed as part of the design. If the opening has a fire, acoustic, accessibility or other formal requirement, tell us before choosing the glazing or hardware. The complete specification must meet the intended use rather than relying on the appearance of a glazed door.
