PRODUCT SELECTION / EXTERIOR SHADING

Terrace Timber Venetians

Exterior timber Venetian blinds with a traditional character, suitable for a properly assessed patio, terrace, balcony or façade project.

Product illustration. The agreed specification and finish determine the supplied product.

Terrace Timber Venetians bring timber slats to an exterior opening. The blind can be raised and its slats angled, giving the space a different relationship with daylight and the view.

The appearance works particularly well where timber belongs in the architecture, from sheltered terraces to renovation schemes. The location still needs a proper exposure assessment; an exterior finish is not a promise that any installation position is suitable.

- Natural timber character outdoors
- Adjustable slats and a lifting blind format
- Finish and timber selected as one specification

At a glance

Material	Specified exterior timber
Timber choices	Pine, cedar, hemlock or iroko, subject to confirmation
Slat widths	50 or 70 mm
Slat profile	Square-edged, 5 mm in the listed construction
Head detail	Coordinated timber valance

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TERRACE TIMBER VENETIANS

Planning your specification

Options to discuss

- Compatible exterior paint or stain
- Timber species selection
- Suitable side-guidance arrangements
- Operating method confirmed for the opening

Practical points

- Colour compatibility depends on the timber species.
- Exposure and operating restrictions require project assessment.
- Exterior timber needs finish-specific maintenance.

Choose the timber as well as the colour

The range is listed with 50 and 70 mm slats and square-edged 5 mm profiles. Timber choices include pine, cedar, hemlock and iroko, subject to the current specification. Their grain and finish response differ, so a colour reference should be linked to the chosen timber species.

A coordinated timber valance covers the headrail. Painted and stained finishes are selected from compatible exterior treatments, including a specific painted-pine palette for this design. We confirm that combination rather than transferring a colour from another exterior system.

Plan guidance, control and upkeep

Side guidance, bracket position and the operating method are specified for the opening. We check the clearance from the wall, the space for the raised blind and the access needed for fitting and future attention.

Exterior timber requires care appropriate to its exposure and finish. Natural movement and changes in colour are part of the material. The quotation should identify the selected timber, treatment, operating arrangement and any maintenance guidance for the position in which the blind will be installed.
