PRODUCT SELECTION / SLIDING PANELS & SCREENS

Textile Surface Panels

Board-backed sliding panels with fabric, denim or fabric-effect surfaces, combining a textile appearance with a defined, framed panel.

Product illustration. The agreed specification and finish determine the supplied product.

Textile Surface Panels are a way to introduce fabric character without using a loose curtain. Their board-backed construction holds a flat surface within an aluminium frame, making the panel part of the room architecture.

The options include written-pattern designs, denim fabric and other textile or fabric-effect facings. We distinguish a real woven fabric from an imitation surface when specifying your chosen finish.

- Textile character in a flat framed format
- A useful solid room-divider surface
- Several distinct decorative treatments

At a glance

Construction	Board-backed decorative panel
Surface options	Fabric, denim and specified fabric-effect finishes
Frame	Aluminium
Opening method	Tracked sliding arrangement

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TEXTILE SURFACE PANELS

Planning your specification

Options to discuss

- Patterned textile designs
- Denim fabric
- Selected fabric-effect facings
- Stacking to suit the opening

Practical points

- The solid backing does not offer the same light transmission as open screen fabric.
- Texture and care differ between genuine textile and imitation surfaces.
- Fixing and performance requirements are assessed for the selected panel.

Choose the right facing for the room

Denim creates a recognisable woven texture; patterned fabric can introduce a more expressive surface; fabric-effect film gives a different finish and care requirement. A sample is the best starting point because a room photograph cannot reliably show the texture or sheen.

The material is applied to a solid supporting panel. It therefore behaves visually as a solid screen rather than as a translucent fabric blind. Think about both the daylight you want to retain and the way the panel will look when drawn across the opening.

Plan the frame and stacking arrangement

Panels travel along tracks and overlap when opened. The number of panels affects the visible divisions, the parked width and the depth of the track assembly. For a room divider, describe the view from both sides and the normal route through the space.

A suitable support is needed above the opening. Where a ceiling is suspended, sloping or uneven, send photographs or drawings so the fixing detail can be assessed. Cleaning advice and any commercial performance requirement are confirmed for the actual selected surface.

Ask about Textile Surface Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
