PRODUCT SELECTION / SLIDING PANELS & SCREENS

Timber Effect Panels

Decorative sliding panels with timber-patterned surfaces, offering a range of grain effects without implying that every face is solid timber.

Product illustration. The agreed specification and finish determine the supplied product.

Timber Effect Panels reproduce the appearance of timber grain on a board-backed sliding screen. The family includes printed wood designs, textured films and other decorative facings with different levels of sheen and relief.

They can be useful where you want a coordinated wood-like pattern across a larger area. The selected design determines the visual effect; its colour name does not establish the species or construction of the supporting panel.

- A broad choice of wood-like patterns
- A coordinated decorative panel format
- Material and finish clearly specified

At a glance

Core	Board-backed construction
Facing	Timber-patterned decorative surface; exact material varies
Frame	Aluminium
Designs	Smooth, printed and textured grain effects

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TIMBER EFFECT PANELS

Planning your specification

Options to discuss

- Straight or figured grain effects
- Bamboo-patterned decorative finishes
- Smooth or textured surfaces
- Pattern orientation agreed across the panel layout

Practical points

- A timber-effect name does not describe a solid timber species.
- Pattern repeats may be visible across a larger area.
- Finish suitability and cleaning advice depend on the selected facing.

Choose the appearance and the material honestly

The finish options include straight grain, more expressive figured patterns, bamboo-like designs and smooth or textured treatments. We state the actual facing in the quotation, rather than calling an imitation finish a solid hardwood panel.

Look at the pattern direction and repeat as well as the shade. A sample may show only a small part of a larger grain design. For several adjacent panels, the arrangement of that grain can be as important as matching the nominal colour.

Coordinate the finished screen

An aluminium frame provides a defined border to the decorative surface. The panel overlap, frame divisions and parked position all affect how the pattern is seen across the opening. These details are planned before manufacture.

The care requirements follow the selected finish. A decorative film and a printed board surface may need different cleaning treatment from genuine unfinished timber. Tell us about strong sunlight, nearby heat sources or frequent contact so that suitability can be checked for the intended room.
