PRODUCT SELECTION / EXTERIOR SHADING

Timber Roller Curtain

Made-to-measure exterior timber roller curtain supplied as the joined wood section, for a project with a separately specified guide and operating system.

Product illustration. The agreed specification and finish determine the supplied product.

Timber Roller Curtain is the wooden curtain element of a roller installation. It is supplied to the agreed dimensions so that it can be incorporated into a properly specified exterior system.

The base product is the joined timber section. Guides, operating hardware and installation accessories are separate matters that must be established before an order is placed. If you need a complete fitted result, tell us so the full project can be assessed.

- A defined made-to-measure timber curtain supply
- Several exterior timber choices
- A clear basis for a fully specified replacement or new project

At a glance

Base supply	Joined timber curtain only
Slat width	47 mm in the listed construction
Timber options	Pine, cedar, hemlock or iroko, subject to specification
Separate items	Guides, operating equipment and fitting accessories

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TIMBER ROLLER CURTAIN

Planning your specification

Options to discuss

- Compatible exterior timber species
- Suitable paint or stain
- Agreed manufacturing dimensions
- A separately assessed complete installation scope

Practical points

- The base product does not include a complete operating system.
- Compatibility with existing guides and hardware must be checked.
- Roll diameter, weight and exposure affect the installation design.

Specify the timber curtain accurately

The listed construction uses 47 mm slats and can be considered in pine, cedar, hemlock or iroko with compatible exterior finishes. The selected species affects weight, appearance and the way the finish develops over time.

The curtain rolls around its intended support, and the roll diameter grows with the drop. Clearance inside any housing and compatibility with the intended tube or mechanism must be checked against the final specification.

Confirm the surrounding system

For replacement work, provide drawings or clear photographs of the existing guides, operating equipment and housing, together with identifying details where known. A similar slat width alone does not establish that a new curtain will fit an existing system.

We confirm what is included, who is responsible for the mechanism and how the finished assembly will be supported. Exposure, operating restrictions and maintenance requirements belong to the complete installation. A supply quotation should therefore identify the curtain dimensions and the agreed interface with the remaining equipment.

Ask about Timber Roller Curtain

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
