PRODUCT SELECTION / SLIDING PANELS & SCREENS

Tinted Glass Panels

Sliding panels made with tinted tempered glass and an aluminium frame, with the glazing specification selected for the intended interior.

Product illustration. The agreed specification and finish determine the supplied product.

Tinted Glass Panels use actual glass to create a clear, refined screen with controlled colour. They can divide an interior while retaining a different sense of depth from an opaque timber or board panel.

Choose the tint and glazing specification around the view, light and privacy you need. A coloured glass sample indicates the finish, but the apparent shade will also depend on the background and lighting.

- Actual glass with a coloured finish
- A defined screen without a solid timber face
- Project-specific glazing and track design

At a glance

Panel material	Tempered glass
Finishes	Tinted or specifically selected solar-control glass
Frame	Aluminium
Movement	Tracked sliding arrangement suited to the glass weight

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

TINTED GLASS PANELS

Planning your specification

Options to discuss

- A choice of glass tints
- Selected solar-control glazing specifications
- Panel and overlap layout
- Frame and track details confirmed for the project

Practical points

- Tinted glass does not automatically provide complete privacy.
- Solar performance requires the exact glass specification.
- Supporting structure and safe access must suit the finished panel weight.

Select the glass for its purpose

The range includes tempered coloured glass and selected solar-control glass constructions. Any solar performance is specific to the selected glazing, so a tint name alone is not a reliable measure of heat or glare reduction.

We record the proposed glass type and finish in the quotation. If the panel forms part of a commercial interior, tell us the project requirements early so that the appropriate safety information and specification can be reviewed.

Account for weight and movement

Glass panels require a track, carrier and support arrangement suited to their weight. The available panel size depends on the glass construction and installation detail; it should not be taken from the dimensions of a lighter fabric panel.

For dividing a room, think about the view from both sides, the position of panel overlaps and the way an open edge will be seen. Access through the opening and the space needed for the parked panels are included in the design discussion. We can assess the measured supply and installation as one project.

Ask about Tinted Glass Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
