PRODUCT SELECTION / SLIDING PANELS & SCREENS

Upholstered Effect Panels

Solid sliding panels with leather-effect, textile, stitched or embossed decorative surfaces, for a tactile feature across windows or room divisions.

Product illustration. The agreed specification and finish determine the supplied product.

Upholstered Effect Panels bring the visual texture of upholstery into a moving screen. The range spans smooth and glossy surfaces, patterned textiles, embossed finishes, stitched designs and selected decorative inserts.

The panels use a board core with specified facings, generally held in an aluminium frame. Material descriptions matter: leather-look finishes are synthetic, while other options use fabric or microfibre. We identify the chosen surface clearly in the quotation.

- A wide range of tactile surface effects
- Solid visual separation between spaces
- Coordinated surface and frame specification

At a glance

Core	Board construction
Facings	Synthetic leather-effect, textile, microfibre or other specified decorative surfaces
Frame	Aluminium in the listed constructions
Movement	Tracked sliding panels

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

UPHOLSTERED EFFECT PANELS

Planning your specification

Options to discuss

- Smooth matt, satin or gloss surfaces
- Embossed, woven or animal-effect textures
- Stitched and geometric patterns
- Selected decorative inserts

Practical points

- Leather-effect surfaces should not be specified as genuine leather.
- Cleaning requirements depend on the selected facing.
- Any performance classification must be confirmed for the complete selected panel.

Compare texture as well as colour

A smooth matt surface, a glossy finish and an embossed pattern can look quite different in the same shade. Some designs imitate reptile textures, fur or stitching; others use woven effects, fine relief or small decorative inserts. They are surface choices within a solid-panel system.

Samples help assess the actual texture, sheen and cleaning requirements. For a panel visible from both sides, the treatment of the reverse face is just as important as the face shown in a room photograph. We confirm both before ordering.

Use a solid panel where visual separation matters

These surfaces are supported by a board, so the result differs from an open-weave screen. They are useful where a room divider needs a decorative solid face or where a window treatment is intended to become a prominent interior feature.

Track support, panel weight and stacking depth must be considered. Some source constructions have specialist properties, but any fire or other performance requirement needs current evidence for the precise panel and facing selected. Tell us the requirement at the start of a commercial enquiry.

Ask about Upholstered Effect Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
