A PRACTICAL GUIDE TO CHOOSING

Wood Blinds Collection

Timber, woven textures and architectural shading.

Product illustration. Samples, specification and the final quotation determine the supplied finish.

A clear route from first ideas to a measured, agreed specification. Compare the construction, the way each product moves and the practical requirements before choosing a finish.

EXPLORE THE COLLECTION

Choose the right format

Product illustration from this category.

Venetian Blinds

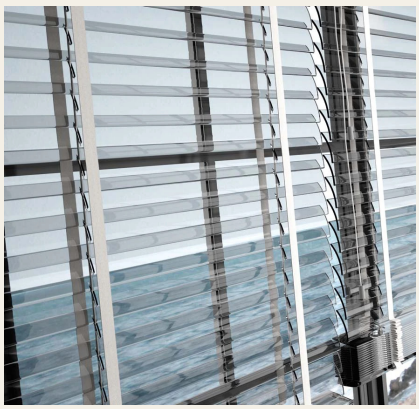

Compare timber, bamboo, metal and textured slats, then choose the finish and controls that suit your window.

A Venetian blind is built around horizontal slats that tilt to change daylight and lift when you want a clearer view. This collection starts with compact and broad abachi wood, then extends to selected timber species, bamboo, metal and applied decorative surfaces.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Cadence Compact Wood Blinds; Cadence 35 Wood Blinds; Cadence Wide Wood Blinds.

Product illustration from this category.

Decorative Blinds

Explore shaped wood, leather, textile, acrylic and commissioned finishes with a clear explanation of each construction.

This collection brings together blinds where the profile or surface is a deliberate part of the design. Choose from curved and shaped timber, genuine leather, synthetic coverings, textiles, acrylic and selected reflective or custom-art treatments.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Tailored Leather Venetian Blinds; Embossed Leather Look Blinds; Stitched Leather Look Blinds.

Vertical Blinds

Side-drawing blinds in timber, bamboo, metal, acrylic and covered finishes for wide glazing and visual screening.

Vertical blinds turn their slats to adjust light and move them sideways when the opening needs to be clearer. This collection includes genuine wood and bamboo as well as metal, translucent materials, acrylic and textile or leather-look coverings.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Wood Vertical Blinds; Layered Finish Vertical Blinds; Bamboo Vertical Blinds.

Product illustration from this category.

Woven Wood and Bamboo

Compare folding, roll-up, roller and sliding systems made from woven wood, bamboo and selected plant fibres.

Woven blinds use connected strips or fibres to make a flexible surface. The material can fold, roll or slide depending on the system, giving the window a different texture from a Venetian made of separately tilting slats.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Woven Wood Roman Blinds; Woven Wood Roll Up Blinds; Traditional Folded Woven Blinds.

Wood and Screen

Timber, veneer or metal combined with technical fabric in Venetian, pleated, vertical, panel and roller formats.

Wood and Screen combines a solid decorative material with a light-transmitting technical fabric. Some products insert the fabric into shaped openings in the wood; the roller version attaches wood or aluminium strips to a continuous screen.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Wood and Screen Venetian Blinds; Wood and Screen Pleated Blinds; Wood and Screen Vertical Blinds.

Timber Shutters

Compare timber shutter constructions by louvre size, profile and opening layout, then choose a finish that belongs to the selected range.

A timber shutter is more than a colour and a blade width. Its frame, panel divisions, louvre profile and opening arrangement determine how it looks and how it works around your window.

- Clear differences between shutter constructions
- Louvre and frame choices planned around the window

Browse this category and compare the products

Start by comparing: Crafted Timber Shutters; Deep Louvre Shutters; Sculpted Louvre Shutters.

Sliding Panels & Screens

Explore sliding screens by their actual material: timber, fabric, glass, metal, polymer or stone, with practical guidance on frames and stacking.

Sliding panels suit wider windows, glazed openings and interior divisions where the screen needs to move sideways. Their material choice is unusually broad, from open timber lattice to fabric, glass and solid decorative surfaces.

- Materials described accurately
- Window screens and room divisions in one coherent collection

Browse this category and compare the products

Start by comparing: Interwoven Timber Panels; Upholstered Effect Panels; Textile Surface Panels.

Exterior Shading

Explore exterior timber and aluminium blinds, shutters, moving screens and adjustable louvres with the installation and exposure considered from the start.

Exterior shading is part of the building, so the product choice needs to work with the façade, supporting structure and weather exposure. The collection includes lifting blinds, hinged and tracked shutters, sliding screens and adjustable architectural louvres.

- Several clearly explained exterior screen formats
- Materials and exposure assessed together

Browse this category and compare the products

Start by comparing: Outdoor Aluminium Venetians; Terrace Timber Venetians; Guided Timber Venetians.

Interior Folding Doors

Compare narrow-section folding doors, broader bifold leaves and glazed timber designs, with construction and included glazing clearly explained.

A folding door can divide an interior where the swing of a conventional door would be awkward. The collection includes narrow linked sections, broader two- or four-leaf arrangements and several glazed or glazing-ready designs.

- Clear comparison of different door constructions
- Glazing and hardware scope identified before ordering

Browse this category and compare the products

Start by comparing: Timber Fold Door; Glazed Fold Door; Panelled Fold Door.

Components and Finishing Details

Enquire about compatible tapes, ladder cords, headrails, timber slats, pelmets and carved details.

Components need a precise specification. A tape, ladder or headrail that looks similar may still be incompatible with the slat pitch, weight or control arrangement. This section provides a clear starting point for an item-specific supply enquiry.

- Clear material and construction details
- Compatible finish choices

Browse this category and compare the products

Start by comparing: Decorative Blind Tapes; Blind Ladder Cords; Venetian Blind Headrail Systems.

FROM SAMPLE TO SPECIFICATION

Make the choices that matter

Compare the actual sample

Select finishes on the product or sample pages and send the shortlist with your enquiry. Include the product, room and approximate quantity so that we can check the right sample format.

Use Add to shortlist beside a finish. Your choices follow you through this collection in the same browser tab and appear in the enquiry form. You can remove an individual selection or clear the list before sending.

Understand the finish

Timber grain, colour depth and the way light falls across a surface can vary between pieces and across a larger installation. A screen image cannot reproduce every detail of a physical sample.

A paint covers the appearance differently from a stain, wash or translucent coating. Surface texture and underlying grain may remain visible. Confirm the exact construction and coating for the selected product rather than relying on a familiar colour name.

Measuring, supply and installation

Send us the location, approximate quantity and photographs of the openings. We can then discuss the appropriate product, the level of survey required and the installation work to include. Specialist panels, doors and exterior systems are assessed around the building and fixing conditions.

An initial estimate by email or WhatsApp is free. Approximate sizes and clear photographs help us understand the scale of the work; the estimate remains provisional until the specification and any necessary survey are agreed.

READY TO ENQUIRE

A useful project brief

A few clear details help us give useful advice and prepare the right next step. You can start with approximate measurements; manufacture proceeds only after the final specification and dimensions are agreed.

The location	Full postcode, building name or number, and whether the project is domestic or commercial.
The product	The public product name, approximate quantity and the finish or sample references you are considering.
The opening	Approximate width and drop, photographs of the complete opening, and any drawings for specialist work.
The service	Supply only, or measuring, supply and installation. Explain any existing equipment that must be retained.
The practical requirements	Access, supporting structure, opening direction, electrical work or any specified performance requirement.
The next step	An initial estimate or an appointment request, together with your preferred contact method.

The agreed cover

The product, installation and any additional manufacturer terms are identified for your order. A catalogue illustration or general product guide does not extend the agreed cover.

The product guarantee is twelve months from delivery for supply-only goods or completion of fitting for supplied-and-fitted goods. Our installation and workmanship guarantee is six months from fitting. Motors and electrical components have twelve months or the applicable manufacturer warranty.

Our team handles enquiries Monday-Friday, 9am-5pm. Online enquiries can be sent at any time. An appointment request is followed by a discussion and proposed dates; it does not reserve a time slot.
