PRODUCT SELECTION / SLIDING PANELS & SCREENS

Woven Fibre Panels

Framed sliding panels with interwoven wood-fibre surfaces, offering a natural woven texture in a solid decorative panel format.

Product illustration. The agreed specification and finish determine the supplied product.

Woven Fibre Panels bring fine natural texture to an interior screen. The decorative face is formed from interlaced wood fibres, with several weave arrangements and selected two-tone combinations.

The aluminium frame gives the woven surface a clear edge. This can be a good balance where you want an organic material character within a more ordered contemporary panel layout.

- Natural woven surface character
- A defined frame around the texture
- A useful option for decorative room divisions

At a glance

Decorative surface	Interwoven wood fibres
Frame	Aluminium
Pattern choices	Several weaves, including selected two-tone designs
Faces	Single decorative face as listed; matching reverse by quotation

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

WOVEN FIBRE PANELS

Planning your specification

Options to discuss

- Several woven patterns
- Selected two-tone combinations
- Compatible finish colours
- One or two decorative faces as quoted

Practical points

- A matching reverse face must be specified.
- Natural fibres need appropriate care and room conditions.
- The full-size pattern is more extensive than a small sample.

Review the weave and the finished face

The different designs change the scale, direction and density of the woven appearance. Some combine two colours within the pattern. A sample should be viewed at both close range and normal room distance to judge how strongly the weave will read.

The standard listed construction is finished on one face. A matching decorative reverse may be considered by quotation, which is particularly relevant when the panel divides two rooms. We confirm the face treatment rather than assuming that both sides are identical.

Give the natural surface the right setting

The weave works well where its texture can be appreciated without constant contact or unsuitable moisture. Its care should follow the selected construction; rubbing or harsh cleaning can alter the appearance of a natural fibre surface.

For sliding installation, the track, overlapping panels and parked width need to be planned together. The final design also records the pattern direction and visible frame divisions. Send the opening dimensions and photographs so we can compare the panel layout with the way the room is used.
