PRODUCT SELECTION / SLIDING PANELS & SCREENS

Woven Metal Panels

Sliding panels made with interwoven metal elements, producing an open, textured screen with a distinctly architectural appearance.

Product illustration. The agreed specification and finish determine the supplied product.

Woven Metal Panels use real metal strands or rods arranged into a repeating mesh. The spaces within the weave allow partial views through the panel, while the metal catches light across the surface.

They can be considered for interior screening and room divisions where a solid board would feel too closed. The selected weave determines the degree of openness and the strength of the visual pattern.

- Genuine metal texture
- Partial visibility through the screen
- An architectural alternative to a solid panel

At a glance

Material	Interwoven metal elements
Appearance	Open mesh; density depends on the pattern
Movement	Tracked sliding panel arrangement
Specification	Weight, edge and guide details confirmed for the selected mesh

Selection guide, not a technical certificate or confirmed order specification. Dimensions, finishes and availability are agreed in your quotation.

WOVEN METAL PANELS

Planning your specification

Options to discuss

- Several weave patterns
- Panel widths and overlap layout
- Suitable frame and edge details
- Track and lower guidance assessed for the project

Practical points

- Open mesh does not give complete privacy.
- Weight differs substantially between designs.
- Decorative mesh alone does not establish security or acoustic performance.

Choose the mesh for the sightline

Different woven patterns create different openings, reflections and apparent density. View a sample against both a light and a dark background to judge the result. A close-up image shows the weave but can exaggerate how solid it will appear at normal viewing distance.

Panel construction and weight vary considerably between the mesh options. We record the chosen material and pattern in the quotation instead of applying one set of dimensions to the complete family.

Make the track part of the design

Metal mesh can create a visually light screen while still requiring a substantial support system. The upper track, carriers and any lower guidance are selected around the actual finished weight and the way the panels will be used.

For a route through a room, consider the edge detail and the parked position as carefully as the central view. The pattern provides visual screening rather than a sealed partition. Tell us if the project has additional security, acoustic or fire requirements so these can be assessed independently of the decorative mesh.

Ask about Woven Metal Panels

Send your postcode, approximate quantity, opening sizes and photographs. Tell us whether you need supply only or measuring and installation.
