WOODEN BLINDS

Motorised wooden blinds

Compare tilt-only and lift-and-tilt controls for wooden blinds. Discuss power, remotes and compatible smart-home options with AdamsBlinds.

Tilt-only operation

Cruze T50 adjusts the angle of the slats. It is a tilt-only option, so we confirm the separate arrangement for raising and lowering the blind as part of your specification.

Lift-and-tilt operation

Somfy Tilt & Lift provides battery-powered operation for compatible 50 mm wooden blinds. We confirm the exact model, blind size and charging arrangement together. Keep the charging point accessible after fitting.

Plan power before fitting

We confirm the exact power supply before you order. Mains-powered options need suitable electrical provision; rechargeable models need accessible charging. Electrical connection work and responsibility are agreed in your quotation.

Remote, app or scheduled control

A handheld remote can be sufficient for everyday adjustment. Smart-home operation needs compatible equipment and a hub where required. Somfy Connectivity Kit supports app control and manual scenes; scheduled and advanced scenes are not available within its TaHoma app setup. Compatible voice-assistant functions can differ. TaHoma switch offers planned scenes for compatible products.

Give us the practical details

Tell us the number of blinds, approximate sizes, whether power is available and what you want to control together. If you already have a smart-home system, include the hub, model and protocol if known so we can check compatibility.
